

Adrian is a 4th-year Clinical Health Psychology doctoral student at the University of Alabama. Adrian's research interest focuses on the psychobiological mechanisms linking social influences on health outcomes. He is interested in elucidating how social factors (e.g., socioeconomic position, interpersonal relationships, stigma, discrimination) result in differences in everyday social interactions and experiences, translating into biological changes impacting mental and physical health. Adrian is also a Pre-doctoral Scholar in the Health Policy Research Scholars program of the Robert Wood Johnson Foundation, led by the Johns Hopkins Bloomberg School of Public Health.
